

CHRIS BRADSHAW

AI Transformation Leader | Applied AI Architect | Product Strategy Director

AI Intro: <https://anthropic.chrisbradshaw.ai/>

Dear Anthropic Hiring Team,

Most failed AI initiatives do not fail because the technology is inadequate. They fail because organisations underestimate that adoption is a human, organisational, and operating-model challenge as much as a technical one.

Over the past 20 years, I have helped organisations navigate waves of technological change across product strategy, digital transformation, innovation, and business growth. More recently, my work has focused on helping enterprises move from AI experimentation to sustainable adoption through AI operating models, governance frameworks, capability-building programmes, and executive alignment.

As Founder of Collective Intelligence and through my work with Board of Innovation, I help leadership teams translate emerging AI capabilities into practical business outcomes. Previously, as Product Strategy Director at Infinum, I created and led an AI Discovery methodology that helped organisations identify, prioritise, and implement AI opportunities aligned to measurable value. Across these roles, I have operated at the intersection of executive leadership, product strategy, organisational change, and technical implementation.

What attracts me to Anthropic is the belief that reliable, controllable, and trustworthy AI is essential for meaningful enterprise adoption. Safety and commercial adoption are not opposing goals. Trust is what enables organisations to deploy AI confidently and at scale. I've spent my career helping leadership teams build that confidence, and Anthropic's focus on reliable, controllable AI reflects many of the principles I believe are necessary for enterprise adoption at scale.

The Applied AI Architect role closely aligns with the work I already do: helping executives understand the implications of frontier AI, translating business challenges into practical technical solutions, facilitating alignment across stakeholders, and supporting the successful deployment of AI systems within complex organisations.

I would welcome the opportunity to contribute my experience in AI transformation, product strategy, and organisational adoption to help Anthropic's customers realise measurable value from AI while maintaining the trust, governance, and accountability required for long-term success.

Kind regards,

Chris Bradshaw
